Reporting period 20 to 27 November 2026, NAV as at 00:00 UTC on Friday 27 November. Upshift vault 0x5776B576474ad2513E550190C5855613859F3A26, Ethereum into Solana. Confidential, for LPs.

Overview

Total assets	Week	November to date	Since deployment
$2,637,008	**+$7,846**	**+$21,845**	**+$55,507**
Upshift, 27 November	+0.3%, 16.8% annualised	+0.9%, 14.0% annualised	+3.8% since 17 August, 14.3% annualised

The share price rose from 1.034953 to 1.038041 over the week, a gain of 0.3%, or 16.8% annualised. Income was marked twice, on 23 and 26 November, adding $8,753 before fees, and fees took $907.

There were no deposits or withdrawals this week, and total assets closed at $2,637,008.

No positions were opened, closed or resized, so the book is the same as last week apart from accrued income and price moves. The main Kamino ONyc loop holds $958,406 of equity, 36.4% of the book. The book runs at 2.02x leverage with a blended loan-to-value of 60.2%, and nothing was liquidated.

Share price since launch, daily Upshift marks, 31 July to 27 November 2026

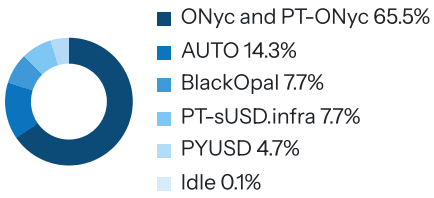

Most of the yield comes from the spread between what the collateral earns and what the borrowing costs, at 2.02x leverage across the book, with a growing share from fixed-yield positions. The share price is marked a few times a week rather than daily, which is why the line steps rather than curves, and the flat stretch before 18 August is the period before capital was deployed.
